

Shared Color Picker — Interaction Diagrams

A single `vanilla-picker` instance is shared across four color swatches (background, gnomon, ground plane, scale bars). The picker is created lazily on first click and re-targeted via `movePopup()` to whichever swatch the user activates.

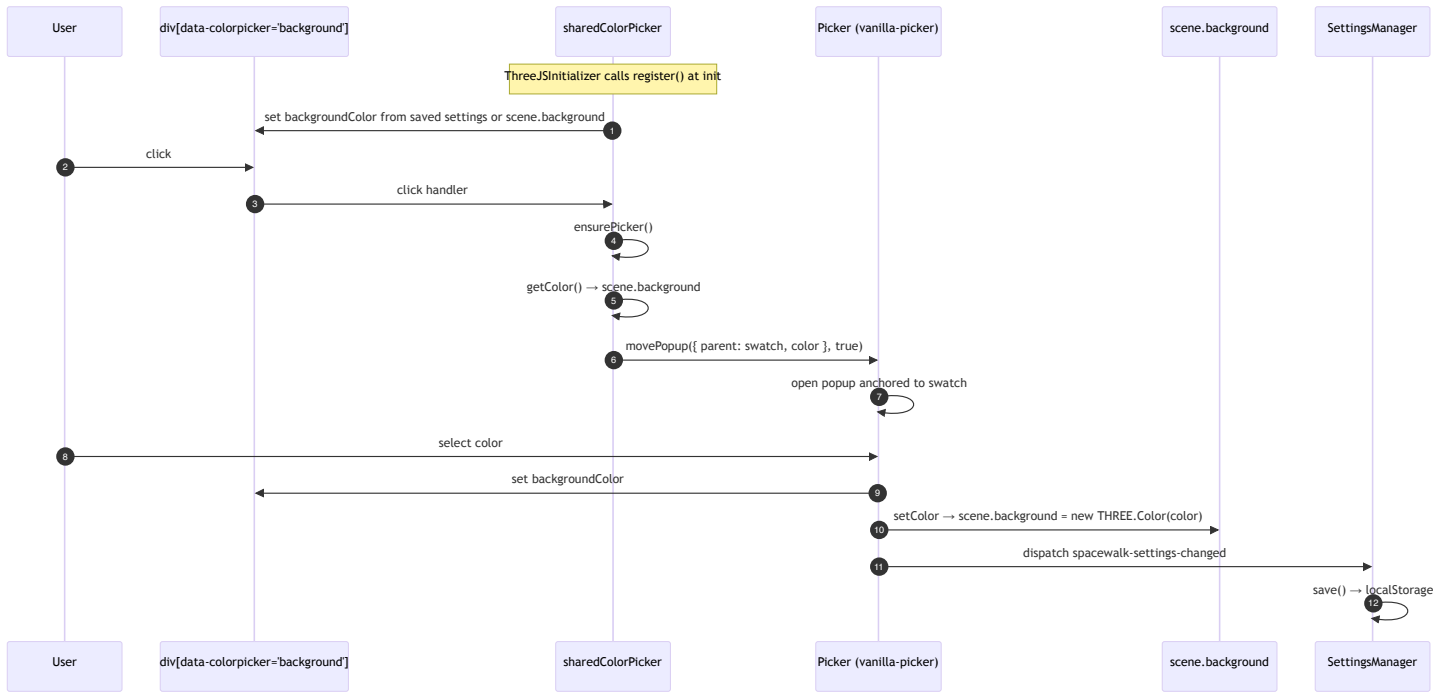

1. Architecture

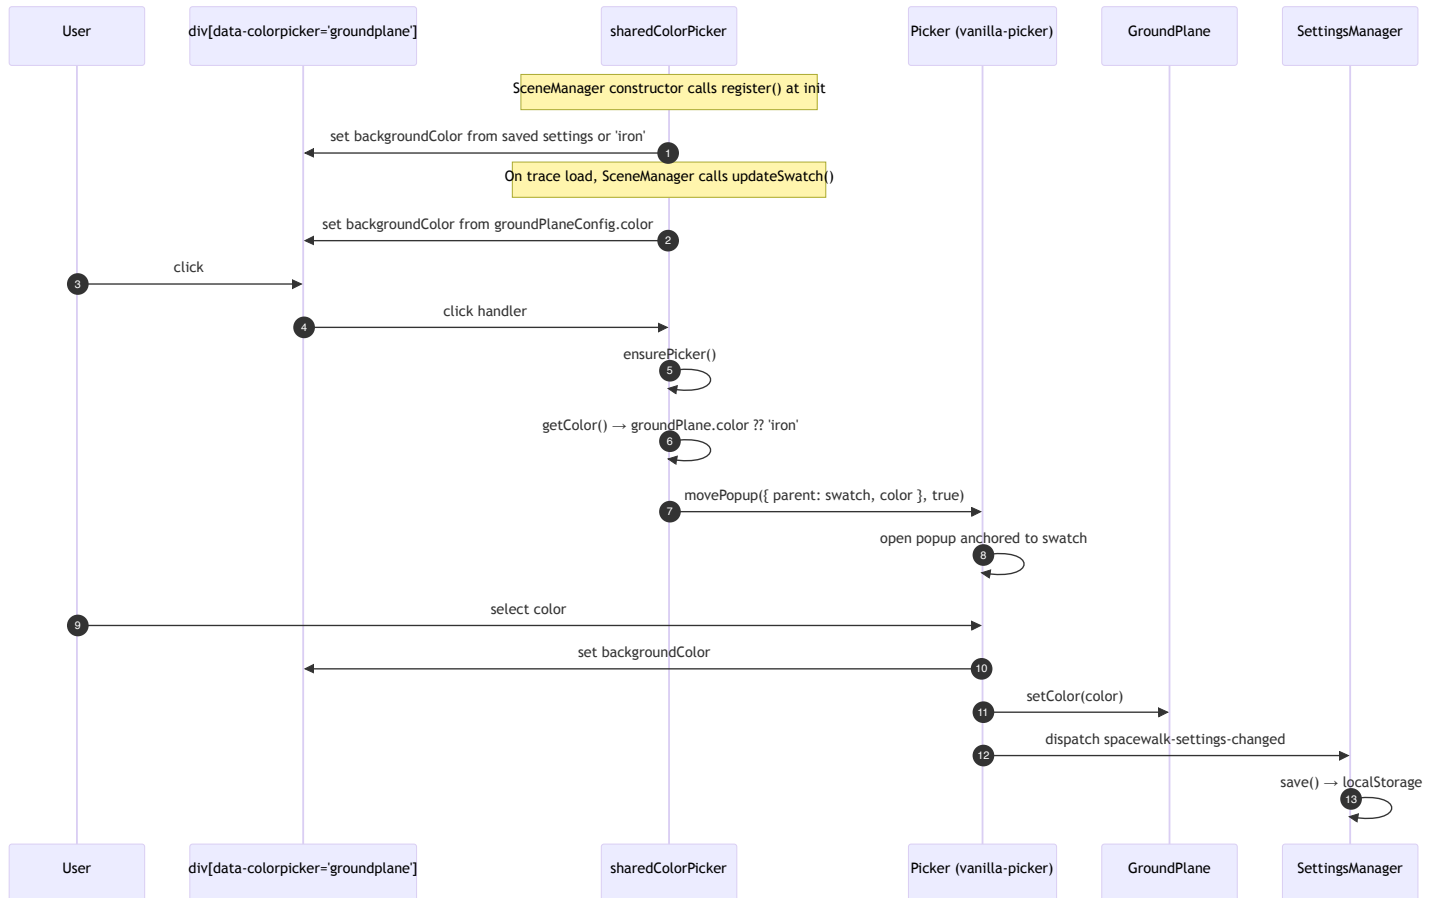

Key Points

Aspect	Detail
Single instance	One <code>Picker</code> , created lazily by <code>ensurePicker()</code> on first swatch click
Re-targeting	<code>picker.movePopup({ parent, color }, true)</code> re-parents and opens the popup
Initial swatch color	Derived from saved settings (localStorage) or default (<code>appleCrayonColorThreeJS('iron')</code>)
getColor (lazy)	Called only on click — reads live color from the scene object
Settings persistence	<code>onChange</code> dispatches <code>spacewalk-settings-changed</code> ; <code>SettingsManager</code> listens and saves to localStorage

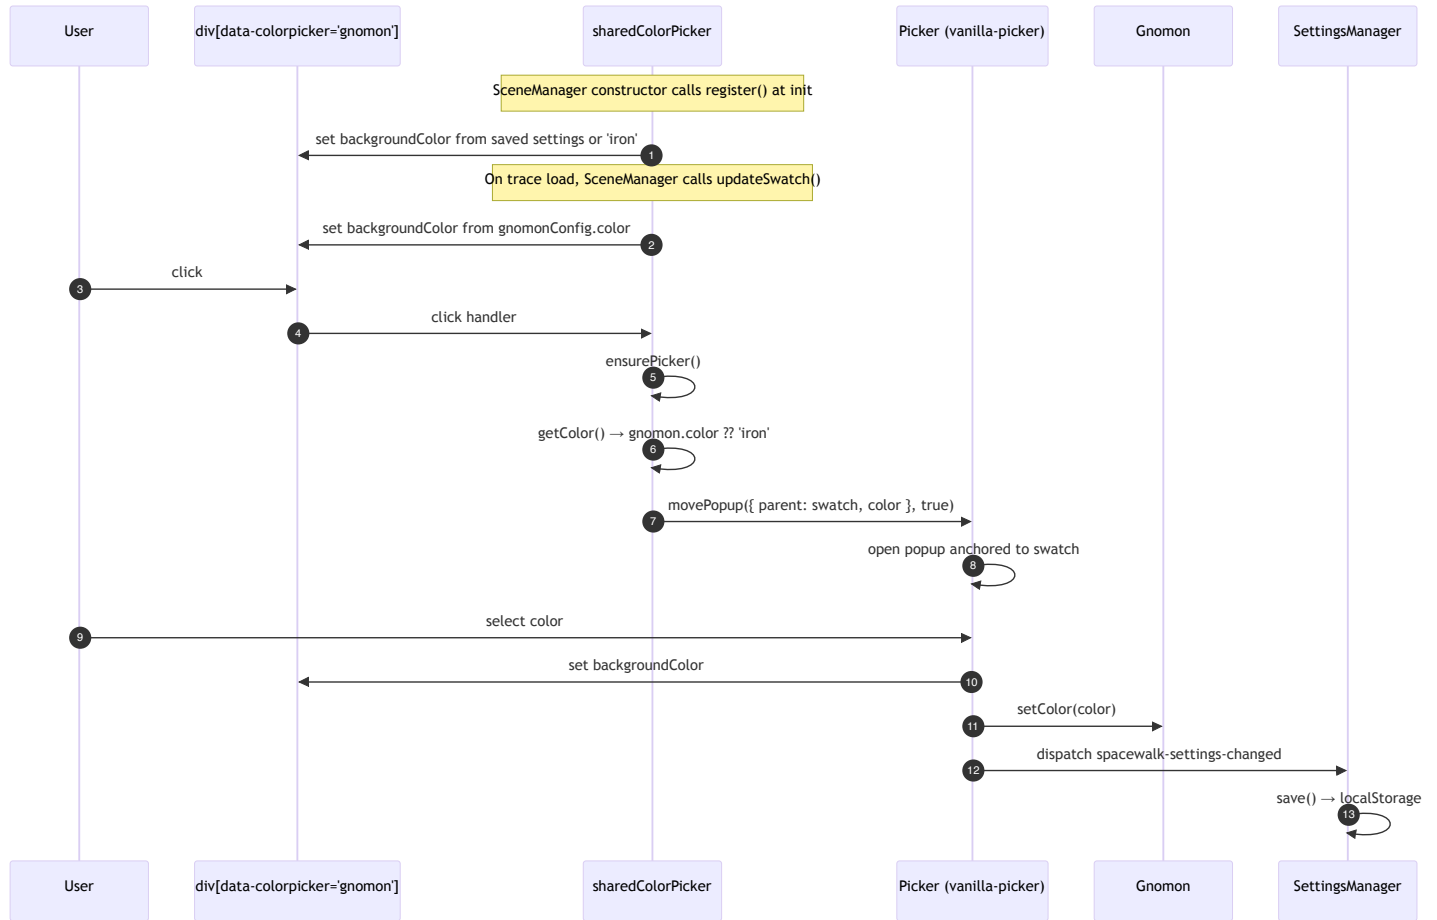

2. Background — Sequence

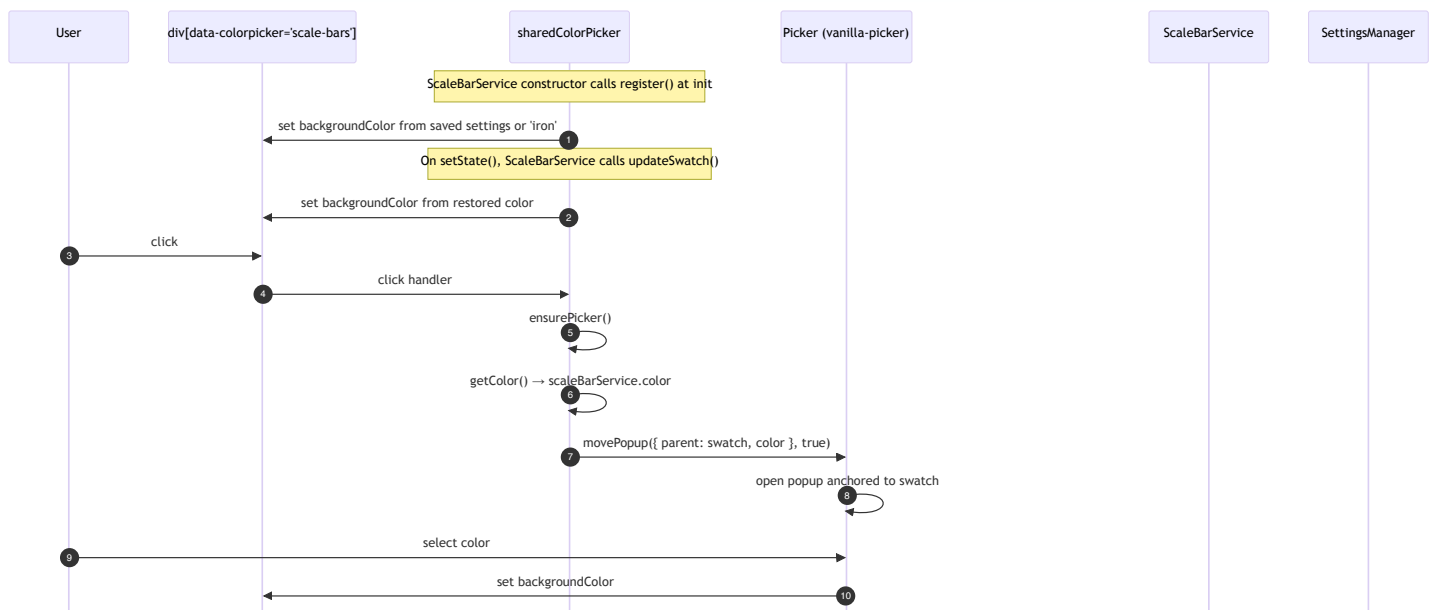

3. Ground Plane — Sequence

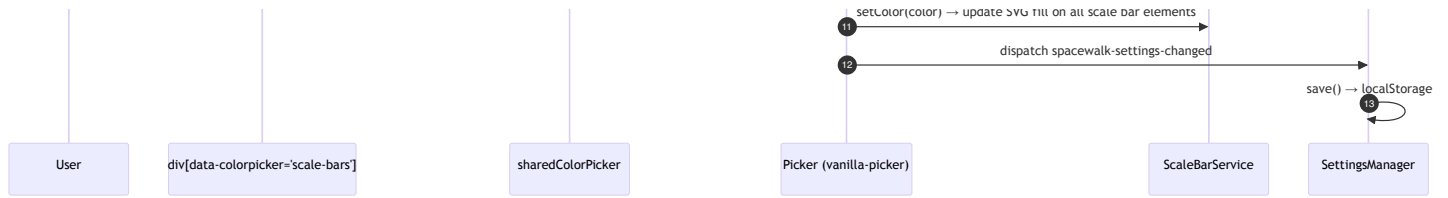

4. Gnomon — Sequence

5. Scale Bars — Sequence

6. Settings Restore — Sequence
